

# PreLube 19

## Non-Sheening, Penetrating EAL Wire Rope Preservative Lubricant

Formulated as a field service lubricant and corrosion preventative, PreLube 19 uses polymer technology to form a bond with the wire rope to create a protective barrier against harsh atmospheric conditions. It penetrates to the core, providing inner-strand lubricity for superior corrosion protection that extends the life of wire rope, chain, and metal parts. PreLube 19 is ideal for use in a variety of applications, including guy wire and structural strand field treatments for corrosion protection, marine tow lines, aerial tramways, ski lift wire ropes, and fission reactor “critical use” areas at nuclear facilities.

- Semi-drying—dries to the touch preventing drippage and sheening after setup
- Self-healing over nicks and scratches in coating
- Easy to apply via spray, dip, paint, brush, swab, drip, or automated wire rope lubricators
- Does not run at elevated temperatures
- Allows visual inspection
- Biodegradable, non-hazardous, non-toxic
- Allows for visual inspection
- Nuclear grade meeting D5OYP12
- NSN# 9150-01-398-7341
- Will not harm rubber sheave liners
- Environmentally Acceptable Lubricant (EAL), VGP compliant
